

Project Title: Rental Management & Community Housing Hub

Project Description:

This full-stack web application serves as a one-stop solution for rental property management and co-living experiences. Property owners, tenants, and community members can efficiently manage rental operations, foster connections, and maintain property infrastructure seamlessly. The platform promotes collaboration and engagement among residents while simplifying property management tasks.

Key Features:

1. User Authentication & Role Management

- Role-based access control for Property Owners, Tenants, and Admins.
- Secure login and account management using OAuth or JWT.

2. Property Listing & Search

- Property owners can list properties with detailed information: rent, amenities, photos, and lease terms.
- Advanced search filters for users to find properties by location, price, and property type.
- Map integration for visual property searches.

3. Tenant & Rental Agreement Management

- Digital rental agreements with e-signatures.
- Rent reminders, payment schedules, and notifications.
- Lease renewal and termination features.

4. Maintenance Request Hub

- Tenants can submit maintenance requests with issue descriptions and photos.
- Automated ticket assignment to service providers or property managers.
- Status tracking (Pending, In Progress, Resolved).

5. Community Co-Living Features

- Roommate matching based on preferences (hobbies, budget, living habits).
- Community discussion boards and events calendar.
- Skill-sharing platform: Tenants can offer services like tutoring or repairs in exchange for credits or discounts.

6. Payment & Financial Management

- Integration with secure payment gateways (UPI, credit cards, wallets).
- Rent collection and payment tracking for property owners.
- Automated rent invoices and payment history logs.

7. Communication Tools

- In-app chat between landlords and tenants for faster communication.
- Announcement section for community updates and property alerts.

8. Real-Time Analytics Dashboard

- Insights on rental income, maintenance expenses, and occupancy rates for property owners.
- Tenant engagement metrics for community activities.

Innovative Suggestions:

1. **AI-Powered Roommate Matching:**
Analyze user preferences, budget, and behavioral patterns to recommend compatible roommates.
2. **Sustainability Rewards Program:**
Gamify eco-friendly practices such as reducing water or energy usage by offering points and discounts.
3. **Marketplace for Goods Exchange:**
Allow tenants to sell, donate, or swap furniture and household items within the community.
4. **Smart Maintenance Alerts:**
IoT integration to monitor property systems (e.g., water leaks, HVAC) and auto-generate maintenance tickets.
5. **Community Well-being Hub:**
Virtual events such as wellness sessions, fitness challenges, and book clubs for tenants.
6. **Voice-Powered Search:**
Enable property searches or tenant queries using voice commands.
7. **Tenant Feedback Insights:**
Use sentiment analysis on tenant feedback to identify areas for improvement.
8. **Emergency Assistance Integration:**
Panic button feature for immediate contact with local authorities or property managers.
